**ORCID id**

ORCID id <https://orcid.org/0000-0002-7545-9727>

I have an extensive background in aspects of occupational, environmental and healthcare science (medical microbiology). Trained in the UK NHS and University Medical Schools, I specialise in microbiology, infection and infection prevention, and hygiene, with over 40 years post-qualification experience. Having worked on collaborative research projects with many clinical colleagues, in respiratory medicine, O&G, paediatrics & child health, orthopaedics, general, colorectal, vascular and endocrine surgery, cardio-thoracic surgery, renal medicine, intensive care, interventional radiology, anaesthetics etc, my experience includes a 7-year attachment as microbiologist to the academic Department of Surgery of the Royal Postgraduate Medical School where I greatly expanded research interests in device-related and surgical infection, antibiotic prophylaxis, and in particular in the prevention, diagnosis and management of hepato-pancreaticobiliary tract infections.

I have additional research interests in infection prevention and control, laboratory diagnostics, antibiotic and chemotherapy, hygiene management, and the wider aspects of occupational and environmental hygiene management.

I have a wide academic overview and involvement in teaching and training of healthcare-related and occupational infection prevention & control, healthcare hygiene, sharps and bio-safety, biohazardous waste management and waste-related occupational safety.

This creates a possibly unique role combining the skills of an infection prevention specialist and waste manager, academic, researcher, teacher and trainer, with many years' experience in the healthcare, regulatory, academic, and commercial (pharmaceutical, manufacturing, waste management) sectors.

**Teaching**

In addition to invited teaching, including teaching overseas, I am a Lecturer in the School of Psychology, Social Work & Human Sciences and in the School of Nursing, Midwifery & Healthcare of the University of West London, teaching there and elsewhere on a range of specialist subjects including microbiology, infection and immunity, infection prevention, hygiene, antibiotic and chemotherapy, epidemiological techniques, molecular biology and genetics, and a more basic introduction to science.

I have taught for more than 30 years, at home and abroad. I teach at all levels, from student technicians/analysts through pre- and post-registration nursing courses, to undergraduate, postgraduate, and post-doctoral science students.

Teaching includes formal taught course sessions, seminars and tutorials as well as more individual training and supervision. Practical (bench) training is included.

For several years, I was examiner in bacteriology for the Institute of Biomedical Sciences.

Teaching commitments also extend internationally and by invitation I have been invited to plan and deliver several extensive specialised training courses in a number of countries. Projects have included both academic and commercial undertakings and have included the provision of on-going educational and academic support for organisations and individuals. I have taught for the International Health Academy and, most notably in Ecuador, for The British Council.

### **Expert Witness**

I have over 30 years' experience in the preparation of Expert Witness reports and briefings, including work in County, Crown and High Court, in the Coroner's Court, at Professional Regulatory hearings, at Employment Tribunals, in Arbitrations, and at Public Inquiry.

I have particular experience in both medical negligence/malpractice cases and in more complex high value occupational and environmental cases and, under instruction by the National Crime Agency, in a small number of criminal cases including murder!

**Medico-Legal  
Society**

I have experience also in commercial cases, in tribunals, in Planning and Licensing (Waste Permitting) applications and appeals, medical device and pharmaceutical licensing, and in Public Inquiry. I have much experience in Meetings of Experts.

Instructions, including instruction from outside the UK, are commensurate with my knowledge and experience and relate to matters of microbiology, in particular:

- infection, infection prevention and control
- post-surgical and device-related infections
- laboratory diagnostics and the control of chemotherapy
- sharps injury
- clinical and other biohazardous waste management
- related environmental and occupational microbiology
- bio-safety

By far the majority of instructions involve cases of alleged medical malpractice and misadventure, the development of healthcare-associated infection, food safety, and community, domestic and occupational hygiene and bio-safety. I have additionally received Instruction in cases overseas. Reports are timely and detailed but concise, with a short and balanced review of the appropriate medical and scientific literature where appropriate.

I may offer pro bono support to carefully selected cases.

Appearance in the Coronial Courts has also included invitations from the Procurator Fiscal to investigate and review activities at a large NHS acute Trust in advance of a fatal accident inquiry (Scotland).

Presently, I receive around 30 instructions per annum with an approximately 50:50 split between defendant and claimant. With additional Liability and Causation reports, this entails in excess of 45 detailed investigations and reports, each addressed to the Crown, County or High Court as applicable. I receive instruction also from the National Crime Agency.

I have received additional instruction in respect of cases outside the UK, including Ireland, Sweden, The Netherlands, Germany, Gibraltar, Jersey, Japan, Hong Kong, and Bermuda. I thus have experience of working in different legal systems and where necessary through interpreters, including live interpreting during testimony and cross-examination etc.

Notable cases include:

- **MO -v- Croydon Health Services NHS Trust (2022)**

A senior theatre nurse was ‘persecuted’ by senior managers and infection prevention staff regarding her insistence on wearing a small plain gold cross on a fine gold chain around her neck. As the cross was visible at the neck of her scrubs, it was demanded that it be removed or hidden. She refused to do this as the cross was a central feature of her religion.

Initially downgraded and demoted to reception duties, and eventually dismissed for gross misconduct she took the case to the Employment Tribunal who found in her favour. The defendant claimed, erroneously, that the cross was contaminated with bacteria and that these were hazardous to patients. It was clear that this contamination would arise only from contact with skin. Her ID badge and its lanyard, and the clothes she was required to wear would be similarly contaminated and would shed bacteria far more readily than the small metal cross. This nonsensical use of flawed IPC reasoning was accepted by the Tribunal who found that the Respondent’s conduct was sufficiently serious to amount to a repudiatory breach of contract and that the Claimant had been entitled to resign and claim constructive dismissal. The dismissal had been both discriminatory and unfair.

- **Reverend Dr William J U Philip & ors (Scottish churches) (2021)**

Judicial review, Outer House, Court of Session P74/21 against restrictions imposed by the Scottish Government to prohibit church services for worship under emergency Covid-19 measures while permitting limited funeral services and wedding ceremonies.

Successfully presented a logical scientific case highlighting the irrationality of that prohibition and, when applying core infection prevention guidance of hands, face, space together with enhanced ventilation etc, that prohibition was unnecessary and unreasonable.

- **IKEA UK & Ireland**

Ongoing support to IKEA operating across the UK and Ireland to maintain all aspects of their direct services and services fulfilled by contractors (deliveries, installations etc) throughout various stages of the pandemic. To ensure most efficient business continuity while complying with various national recommendations.

- **Christian concern (2020)**

Christian Concern were adamant that Government restrictions on the provision of church services, despite the evolving Covid-19 pandemic was inappropriate, unnecessary and unacceptable, and possibly contrary to the provisions of Magna Carta.

A comprehensive report was presented to outline the many key safety steps necessary for in situ services and additional telecast services that would ensure a high level of biosecurity.

- **Avon and Somerset Constabulary Major Crime Investigation Team on the Instruction of the National Crime Agency (2020)**

A comprehensive evaluation of the case of an elderly and part-disabled lady who was seriously injured at a UK holiday camp when an air conditioning unit fell from the ceiling and hit her causing multiple injuries. After many weeks in hospital, she eventually succumbed to infection. NCA needed to establish if the infection was a consequence of the initial injury, a complication of negligent hospital care, or perhaps a consequence of a pre-existing sacral pressure sore.

- **Prime Care Solutions (Kingston) Limited -v- Kingston Hospital NHS Foundation Trust (2020)**

In preparation for formal adjudication, a comprehensive examination and critical review of alleged defects of design and construction, and of maintenance, in several representative areas of this busy hospital was undertaken. The potential impacts on hygiene and infection prevention were evaluated together with an overarching assessment of the likelihood of excessive microbial loading of the clinical environment creating a likely risk to patients.

At adjudication, a successful outcome exceeding £1.25million was awarded to the Trust who had faced challenge by the Claimant for deductions and non-payment of PPI fees.

- **The Equality Ombudsman (Diskrimineringsombudsmannen) -v- The State through Karolinska Institutet (2016), and**

- **The Equality Ombudsman (Diskrimineringsombudsmannen) -v- Folkandvården Stockholms län AB (2017)**

In each case, discrimination was alleged when Muslim female dental students / dentists were prohibited from wearing disposable sleeves during clinical work in order to comply with religious obligations. The reason given was that disposable plastic sleeves contradicted an over-arching 'bare below the elbows' policy; that the risk to patients was great and would increase the risk of infection; that disposable sleeves might be contaminated with potentially harmful bacteria; that disposable sleeves could contaminate and be contaminated by the student's clothing; that disposable sleeves might contaminate the clinical environment during removal after use; and that it would place an additional and unreasonable burden on teaching activities, and be difficult to audit compliance.

- ***Pseudomonas aeruginosa* prosthetic joint infection (2016)**

What was the impact and role of early hydrotherapy in the development of a cluster of prosthetic joint infections?

- ***Pseudomonas aeruginosa* infection after high ear piercing (2015)**

A cluster of 10+ severe and ultimately disfiguring *Pseudomonas aeruginosa* infections following deep ear cartilage piercings. Questioning the lack of formal guidance and the poor-quality advice given during EHO inspections, the source of infection could be tracked to contamination of potable water and gaps in the

spectrum of activity of the recommended antiseptic and disinfectant products, together with lack of instruction regarding post-piercing care.

- **HH (a celebrity tattooist) -v- MGN Newspapers (2014)**

A celebrity tattooist was, without prior knowledge, identified in a national newspaper as being HIV+ with an implied risk to those visiting his salon and receiving tattoos or piercings.

- **Secretary of State for Justice / HMP Long Lartin (2013)**

Group litigation alleging unacceptable and unsafe restrictions in the supply of safe water supplies, and deficiencies in access to hygiene facilities, for prisoners housed in segregation.

- ***Clostridium difficile* infection in a hospital cleaner (2013)**

Was training, supervision, PPE provision, and standards of toilet cleaning sufficient to protect a hospital cleaner from acquired infection?

- **Powertrain Group Litigation (2010)**

Group litigation, led by Karl de-Lloyd of Thompsons Solicitors and Paul Bleasdale of No 5 Chambers, on behalf of 100+ former employees of Powertrain at the Longbridge car plant, Birmingham, who claimed damages for respiratory disease caused by exposure to contaminated coolant oil. The Defendants were their employers Powertrain and Houghton PLC who supplied the coolant oil and managed them on site during the material period.

The world's largest outbreak of occupational lung disease, critical failings were identified in the approach to management of metal working fluid hygiene, methods of screening for bacterial and fungal contaminants, and containment of aerosols.

I received formal training in performing as an Expert Witness as part of the Imperial College Professional Development Programme before the Recorder of London on its *Acting as an Expert Witness* course.

I hold the Bond Solon/Cardiff University Law School Expert Witness Certificate (civil law). Additionally, I attended in June 2013 the Bond Solon 'Hot Tubbing' (Concurrent Expert Evidence) course. I have received relevant training updates from Cardiff University Law School/Bond Solon (2019 and 2020) and from the Royal Society of Medicine (2020) with relevant training updates from Cardiff University Law School/Bond Solon and with the Royal Society of Medicine.

I am registered with the following Expert Witness and Consultant organisations:

- Premex+
- UK Register of Expert Witnesses
- National Expert Witness Agency (NEWA)
- Expert by Big Village (previously Engine International Inc)
- Silverlight Expert Network
- Gerson Lehrman Group Consulting
- Association of Personal Injury Lawyers (APIL)
- HKA Consultancy Services (Forensic Technical Services)
- National Crime Agency

**Professional and  
regulatory affairs**

I was the winner of the **Lawyer Monthly Expert Witness (Environmental and Microbiology) Award** in 2016, and again in 2019.

ICO Registration: Z2138376

DBS (Extended): 001768700465 (date of issue 9 February 2022)

I have (January 2022) been appointed to the ongoing Scottish Hospitals Inquiry under contract CASE/566755 - Specialist And Expert Support Services, with responsibility for matters of ventilation and water hygiene.

**For the Royal Society of Biology**

Formerly Vice Chair of the Royal Society of Biology Professional Registers Panel, and a member of the Editorial Board of the Royal Society of Biology award-winning journal, The Biologist.

**For the Royal Society of Chemistry**

I have sat for the Royal Society of Chemistry on its Professional Registers Panel, in a reciprocal arrangement with the Royal Society for Biology.

**For the Care Quality Commission**

I was a Specialist Advisor to the Care Quality Commission (retired 28 February 2018)

**For the Healthcare Commission**

Until its dissolution in Q1 2009, I held an appointment with The Healthcare Commission, as a Specialist Advisor responsible for the investigation of complaints and concerns regarding individual patient episodes.

**For the Health and Care Professions Council**

Between 2013 and 2015, I sat on Health and Care Professions Council (HCPC) Fitness to Practise panels. HCPC is the independent statutory regulator safeguarding the health and care of persons using or needing the services of its registrants.

**For the Royal Society for Public Health (RSPH)**

I sat for some years on the RSPH Product Accreditation Panel, and on its Behaviour Change Special Interest Group.

**For the Association of Anaesthetists of Great Britain and Ireland**

I currently sit as an Independent Specialist member on the Clinical Safety Committee of The Association of Anaesthetists of Great Britain and Ireland (AAGBI).

**Consulting**

I deliver a consultancy service engaged by NHS Trusts, by the commercial sector, and by regulatory bodies, governments and government agencies, both at home and abroad.

I remain active in health policy matters, regulation, and the wider health & safety provision for healthcare professionals and support staff, and enhanced patient care.

In addition to the above, I consult to a diversity of NHS Acute, Community and Ambulance Trusts, and to commercial and other organisations, advising on matters that include *inter alia* improved hygiene management, sharps safety, and healthcare waste management.

In the commercial sector, I advise both informally and formally at Board and Investor level regarding application, product placement and opportunities, relevant regulatory frameworks, and business threats, to new ventures and products. This expands to the provision of technical and advice and guidance on product refinement, assessment and evaluation, regulatory compliance, innovative market opportunities and, where appropriate, on clinical trial or early in-use assessment and scientific or other publication and presentations.

Commercial consultancy appointments may be task specific or more general but are always covered by a non-disclosure agreement. Clients have typically included:

- compliant disposal of medical devices and pharmaceutical products
- antiseptic and disinfectant developers/manufacturers
- waste packaging and healthcare waste treatment providers
- waste treatment technology developers
- cleaning & hygiene product developers
- PPE and safety device developers

I regularly represent clients in their negotiations with and submissions to regulators, to ease the path to regulatory approval/compliance.

## Research

I maintain an active and successful research program that includes, *inter alia*, a substantial undertaking in contract research, guest and commercial presentations, and specialist training and support for a number of postgraduate and doctoral students.

Flowing from this research, I have an extensive publication record comprising blue sky, translational and applied research publications in addition to review and opinion papers and contributions to a number of major textbooks.

My research-driven practice embraces a range of both analytical and consultancy services, extending also to matters of planning and licensing, personal injury and professional negligence, medical malpractice, healthcare and occupational microbiology and hygiene, waste management and bio-safety.

I offer specialist services in a number of key areas:

- teaching & training in the private sector allied to health
- healthcare, occupational & environmental microbiology
- hospital, community & environmental infection control; healthcare & occupational hygiene
- sharps (needlestick) injury
- clinical waste management & control; waste audit
- safety evaluation; risk assessment; teaching & training; instruction manuals
- site survey; audit; hygiene evaluation & ppe assessment
- proof of process; air dispersal studies; environmental control & monitoring

- litigation; briefings; planning & licensing
- air quality monitoring & clean room control
- process control; product design & evaluation
- other contract research & research training

An increasing number of supplementary consultancy appointments created opportunities for further research output, including but not restricted to studies of novel antimicrobials, and of infection risks associated with sharps and other healthcare wastes.

It is an additional feature of my approach to a research-driven consultancy that I have often found it possible to integrate research and teaching into contract audit and investigation of NHS Trusts activities. Thus, contracts involving the audit of a Trust's waste management activities, environmental hygiene or sharps safety compliance invite, as standard, an infection prevention and control (IPC) nurse or environment manager to join the study. This provides a chaperone to facilitate task completion without undue delay, while providing an opportunity to teach and when possible to support that individual in an additional course of study with a project in fulfilment of a university degree or professional qualification course.

Currently active research programmes include:

- hand hygiene for healthcare ancillary and support staff and waste sector workers
- fake science & fake science publishing
- conflict between hygiene and infection prevention policies, and possible religious discrimination
- planning applications for clinical waste management sites – what is the basis for fear and resentment?
- simultaneous use of Luminol chemoluminescent and fluorescent Glogerm™ products to evaluate blood splash contamination and methods for containment
- science and regulation – is there any evidence for continuing discord?
- rigid infection prevention and control rules and religious discrimination – can this be improved?
- contamination of sharps bins – an overlooked hazard in the healthcare environment
- blood and body fluid exposures of hospital ancillary staff and waste handlers

**The Care Quality Commission  
and  
The Healthcare Commission**

From 2006 until its dissolution in 2009, I held an appointment as a Specialist Advisor to the Healthcare Commission. In this role, I reviewed, investigated and advised on many complex cases concerning issues of infection, infection prevention and control, post-surgical sepsis, errors in antibiotic prophylaxis and diagnostics, and infections caused by the predictable 'superbugs' *Clostridium difficile* and methicillin-resistant strains of *Staphylococcus aureus* (MRSA).

I have additionally investigated issues of communication failures in the healthcare environment, and the relationship between management obligations to government healthcare policy and delivery targets and clinical safety with emphasis on hospital hygiene and infection prevention.

**Healthcare and other  
biohazardous waste  
management**

More general advice to the Healthcare Commission embraced issues having a root cause in communication errors, policy and process, staffing levels and continuity care, and patient expectation.

Subsequently, I held an appointment as Specialist Advisor to the Care Quality Commission (CQC), the successor organisation of The Healthcare Commission, retiring from there on 28 February 2018.

I have held appointments and a diversity of consultancy appointments/engagements, at home and elsewhere, in aspects of predominantly clinical (healthcare) waste management over more than 25 years.

I have specialised in the integration of healthcare waste and safe sharps waste management with effective hygiene management and infection prevention and control, in the healthcare environment, across the waste industries, and in the community.

This has included much teaching and consultancy in resource-poor and developing countries and has evolved to specialism in the particular difficulties face by, and seeking pragmatic solutions for, isolated and island communities in the UK and elsewhere.

By invitation, I was the author of the Scirus Topic Page on Clinical Wastes. A SciTopics Page was, until recently, a freely accessible, wiki-like service for the scientific community where scientific experts summarize specific scientific topics, and where links to the latest, most relevant journal literature and web sources are presented on one page. Authors are invited based on the merit of their published research and will always be a scholar who is known and respected in the field.

I have contributed a chapter on clinical waste management in the Encyclopedia of Environmental Health (Blenkarn JI. *Clinical waste management*. In: Nriagu JO (ed). 2011; 1: 716–731. Burlington: Elsevier. 2011). This Encyclopedia was subsequently updated as *Reference Module in Earth Systems and Environmental Sciences*. Nriagu JO (ed). Elsevier Inc, 2015.

I was recognised as Top Reviewer for 2010, and for 2012, for the Elsevier journal *Waste Management*, “In recognition of an outstanding contribution to the quality of Waste Management”.

I am the owner, creator and moderator of the *Clinical Waste Discussion Forum* accessible at <http://www.ianblenkarn.com>.

**CIWM Waste  
Regulation award**

I received the prestigious **Chartered Institution of Wastes Management Waste Regulation Award** for 2008, for my paper:

Blenkarn JI. Quo vadis? Science and regulation as uneasy bedfellows  
*The Open Waste Management Journal* 2008; 1: 1-3

**Health &  
Safety**

As a member, until 2021, of the CIWM Health & Safety Group Steering Committee, I was responsible for several key developments in H&S matters, including:

- integration of a commitment to health & safety within the Institution’s CPD programme requirements

### Other appointments

- studies to review and evaluate the uptake of this initiative and its place in the creation of further educational opportunities, and to seek means to circumvent barriers to health & safety aspects of professional development
- work with other organisations to prepare a range of flash cards of other simple safety guides, aimed particularly at temporary and agency staff, using pictograms and foreign language translations
- the reporting of serious adverse incidents and health & safety prosecutions in the weekly CIWM online newsletter

I currently sit as an independent specialist member on the Clinical Safety Committee of the Association of Anaesthetists of Great Britain and Ireland (AAGBI).

By invitation, I hold an additional appointment to the NHS National Institute for Health Research as an assessor in the following categories:

- Health Technology Assessment (Prioritisation & Commissioning)
- Efficacy and Mechanism Evaluation
- Public Health Research
- Service Delivery and Organisation

I was a member of the Infectious Diseases Research Network, and the Healthcare Waste and Environmental Resources Group of Northampton University.

I am an assessor/adviser for major funding applications submitted to the National Institute for Health Research (NIHR)

I was a contributor to the ASTM International F2132 sharps container standard task group, reporting to the corresponding BSI/ISO committee.

### Media

Over 30 or so years, I have received occasional invitations to contribute to live-link and other video presentations, in addition to both live and recorded pieces on UK television and radio.

Topics include matters of infection prevention and control, hygiene, antibiotic, resistance and more general matters of microbiology including the global spread of 'superbugs', occupational infection risks, and more general occupational and domestic hygiene issues.

Additional to this, I have for many years prepared for clients Standard Operating Procedures (SOPs) and training manuals, product and topic reviews, and more comprehensive scientific and technical guides.

**Scientific  
publishing**

Founding Editor-in-Chief:

**International Journal of Hospital Environment & Hygiene Management**

Member of the Editorial Board of:

**The Journal of Hospital Infection**  
**The Open Waste Management Journal**

Former member of the Editorial Board of:

**The Biologist**  
**The Journal of Infection Prevention**  
**Journal of Electronic Health**  
**The International Journal of Engineering, Science and Technology**

Member of the editorial review panels of:

Regular reviewer for:

**BioMed Central (BMC) Public Health**  
**Critical Reviews in Environmental Science and Technology**  
**Infection Prevention in Practice**  
**Journal of Infection Prevention**  
**Public Health**  
**Waste Management**  
**Waste Management & Research**  
**PLOS One**  
**The International Journal of Environmental Research and Public Health**  
**The International Journal of Occupational and Environmental Health**  
**The Journal of Environmental Management**  
**The Journal of Public Health (Oxford)**  
and other medical, scientific and technical journals as invited

Established reviewer for the National Institute of Health Research (NIHR) Evaluation, Trials and Studies Coordinating Centre applications and reports.

I conceived and wrote the bimonthly '*And Finally.....*' column in the **Journal of Infection Prevention** written under the pen name '*IPSus*'.

***Pro bono, unpaid, &  
charitable appointments***

On behalf of the British Council, I have provided support and teaching in several South American countries on topics of clinical waste management, infection control and hospital hygiene. This has been most active in Ecuador where, since 1996, I have been an Honorary Fellow of Fundación Natura, Quito.

I am a member of Sense about Science <http://www.senseaboutscience.org.uk>

I have provided *Pro bono* consultancy support to The International Committee of the Red Cross and to Médecins Sans Frontières in aspects of infection control during emergency healthcare delivery, and healthcare waste management respectively.

I provided *Pro bono* support and guidance to individuals involved in adverse health matters following the 2001 UK Foot and Mouth Disease outbreak. Additionally, I continue to support a cohort of over 40 waste handlers who suffered sharps injury during the course of their employment. This forms part of an on-going research portfolio that includes, *inter alia*, many overlapping studies of biohazardous and clinical waste management activities.

	I provide advice and support to a number of charitable and aid agencies, including the UK-based NOMADS Hepatitis C support group.	
<i>Stemnet</i>	<p>I devote additional time to 'put a little extra back' and invest in the futures of young people, to help formulate their career aspirations and setting of future goals, to support, enthuse and inspire the scientist of tomorrow, and more generally to engage school students in science, technology, engineering, and mathematics.</p> <p>To achieve this, I am a volunteer and Ambassador for StemNet (<a href="http://www.stemnet.org.uk">www.stemnet.org.uk</a>), the UK educational charity that works with schools to encourage youngsters to choose a science, technology, engineering and mathematics career.</p>	
<i>Spark!</i>	I support and volunteer for SPARK!, London's Original Education Business Partnership ( <a href="http://sparklondon.org/">http://sparklondon.org/</a> ). Spark! works in association with Hounslow Education Business Charity to find inspiring opportunities for young people to gain work experience, understand the labour market and develop confident enterprise and employability skills. For SPARK! I contribute with project-related tutorials and project evaluations, mock interviews, mentoring and more generally career guidance initiatives.	
<i>Social Mobility Foundation</i>	I provide long-term mentoring in science, particularly the biological sciences, to gifted young people from generally low-income backgrounds through the <a href="http://www.socialmobilityfoundation.org/">Social Mobility Foundation</a> .	
<i>Achieving for children</i>	I provide practical support as a mentor to children through Achieving for Children ( <a href="http://www.achievingforchildren.org.uk/">http://www.achievingforchildren.org.uk/</a> ) the social enterprise company created by the Royal Borough of Kingston upon Thames and the London Borough of Richmond upon Thames to provide their children's services.	
<b>Current External appointments</b>	<ul style="list-style-type: none"> <li>• <b>Specialist Lecturer</b></li> <li>• <b>Independent Specialist Member of the Clinical Safety Committee</b></li> </ul>	<p><b>University of West London</b></p> <p><b>Association of Anaesthetists of Great Britain and Ireland (AAGBI)</b></p>

Registered Member: UK Register of Expert Witnesses  
E/2317 – Environmental and related healthcare microbiology

Chartered Biologist: BMS109002046

Chartered Scientist: BMS109002046

I hold the National General Certificate in Occupational Safety and Health.

This NEBOSH Certificate consolidates appointments as the Deputy Safety Officer to the Department of Infectious Disease, Imperial College London, from mid-1980s to 2004, and subsequently as a Safety Advisor to several SME clients.

### **Lectures**

Additional to case presentations, ward and laboratory tutorials etc, and formal teaching at RPMS, Imperial College and the University of West London, I have lectured extensively, including many Guest Lectures, at Universities, Medical Schools and Hospitals, and at conferences and symposia around the world. Topics have included post-surgical infection, general clinical and laboratory bacteriology, antibiotic and chemotherapy, epidemiology, hospital infection control, hygiene, and healthcare and sharps waste management.

Reviews and original papers have been read at many national and international symposia. On behalf of various pharmaceutical companies, I have written and delivered detailed product reviews and have appeared on several video presentations for commercial use. By invitation, I have made several presentations on national TV and radio, generally concerning matters of widespread public concern regarding healthcare-related infection risk.

### **Continuing professional developments**

I am an active participant of the CPD schemes of:

- Royal Society of Biology
- Institute of Biomedical Science

### **Science and Business ethics**

I am fully committed to the Department of Business, Enterprise & Regulatory Reform Universal Ethical Code for Scientists

(<https://www.gov.uk/government/publications/universal-ethical-code-for-scientists>  
<http://www.berr.gov.uk/files/file41318.pdf>).

This Ethical Code demands rigour, honesty and integrity, respect for life, the law and the public good, and responsible communication.

## Research papers

## Publications

Anaerobic bacteriology of chronic bronchial disease with a refined method of sampling bronchial secretions.

Gardiner IT, **Blenkarn JI**, Stradling P, Darrell JH.

*British Journal of Diseases of the Chest* 1977; **71**(4): 277-84
