

My general medical training was followed by neurology posts in many of the major neuroscience centres in London including the Hammersmith Hospital, the National Hospital for Neurology, the Royal Free Hospital and King's College Hospital. I have also done imaging research at the Hammersmith Hospital and was awarded a PhD in Clinical Neurosciences by Imperial College, London. This was followed by a two year post-doctoral Fellowship at the National Institutes of Health in the United States looking at brain plasticity. I became a member of the Royal College of Physicians in 1992 and a Fellow of the Royal College of Physicians in 2005.

In June 2001 I was appointed as a substantive NHS consultant in the Regional Neuroscience Centre at King's. I was appointed the Lead Clinician for Neurology for King's in Sept 2001. I set up the out-of-hours stroke service at King's and led the amalgamation of consultants in neurology and geriatric medicine to create a much larger stroke department at King's. This acted as a foundation for the successful application of King's to become a Hyper Acute Stroke Unit in 2010.

In 2012 I was appointed the Lead Clinician for Stroke at King's. I was instrumental in the move of stroke from the division of acute medicine to neuroscience aligned to the Regional Neuroscience service at King's. I took over the role as the strategic lead of the stroke services at Denmark Hill and Princess Royal following King's acquisition of the PRU in October 2013. Since then we have seen the stroke services at both sites perform consistently, well on the National stroke audits. I am also the Lead of the South-East London Operational Stroke Network.

I have recently been appointed as Lead for the combined Neurology and Stroke service at King's.

I started private work at the Harley Street Clinic in 2008 and have enjoyed a close working relationship with my neurosurgical colleagues.

I have medicolegal expertise in the areas of stroke and neurology. I have attended a number of courses in relation to medicolegal work. I have done a large amount of medicolegal work working for both the claimant and defendant and also as a single joint expert. I am able to provide expertise in the area of causation as well as condition and prognosis. I usually see patients in my private rooms at 78 Harley Street. I am also able to make home visits
