Current Practice and Roles:

NHS Practice

I am a Consultant at Liverpool University Hospital Foundation Trust since November 2019 when the Royal Liverpool and Broadgreen NHS Trust (RLBUHT) and Aintree Foundation Trust merged into a new organisation. I have been working as a Consultant in Trauma and Orthopaedics at RLBUHT since April 2004 at Royal Liverpool and Broadgreen hospitals. In my role a part of my clinical duties I am heavily involved in teaching and training of junior doctors and medical students.

Acute trauma work

This takes place at Aintree Major Trauma centre which is the main site in the area of Merseyside for complex trauma. Within my subspecialty interest as a Limb reconstruction Surgeon I treat patients with complex periarticular fractures of the lower limb, open fractures including limb threatening injuries, fractures associated with bone loss, and patients with multiple injuries.

Elective work

At Broadgreen Hospital, Liverpool I treat patients with post-traumatic complications such as non unions (fractures that fail to heal), malunions (fractures that healed causing deformity), bone and implant related infections, joint contractures. We have a dedicated standalone ward for Limb Reconstruction patients with an annexed dedicated gym where we believe high quality multidisciplinary care is provided. The reputation of the [Liverpool Limb Reconstruction Service](#) is such that we receive tertiary referrals from other hospitals in Merseyside, from Lancashire, Greater Manchester, Cumbria, the Isle of Man, North Wales and we have patients seek care from us from other parts of the country.

Lead of the Liverpool Limb Reconstruction fellowship

I supervise the running, training and appointment of the International Limb Reconstruction Training fellowship in Liverpool. This is a highly sought position for orthopaedic surgeons who seek to establish their practice in limb reconstruction surgery. The unit has a worldwide reputation. We have trained and hosted visiting surgeons from every part of the globe.

Executive committee member British Limb Reconstruction Society

I have been elected by the society as a member at large since 2018 which is a great honour for me. It allows me to contribute on improving the organisation and care provision as well as medical education within our area of work at National and International level.

Honorary Lecturer Department of Medical Sciences University of Liverpool

I am regularly invited on providing lectures in courses and teaching sessions by the University of Liverpool in the field of orthopaedic surgery and trauma.

Reviewer and co-editor for the [Journal of Strategies in Trauma and Limb Reconstruction](#).

This is a leading worldwide peer review publication in the field of Limb reconstruction Surgery. I have been involved as a reviewer for several years for this journal which is adopted as official publication of numerous Limb Reconstruction societies globally.

Medico-legal Practice

I run a busy medico-legal practice and have been preparing medico-legal reports for fourteen years. I undertake reports for claimant and defendant solicitors alike in both the personal injury and tin he clinical negligence arenas and aim to provide fair unbiased reports for the assistance of the court in all cases. I am comfortable providing reports dealing with general musculoskeletal trauma but also specialist reports dealing with complex trauma limb injuries over and above the remit of a non-subspecialist trauma and limb reconstruction expert. Increasingly instructions tend to relate to complex and higher value cases.

Medicolegal Consulting Venues:

Liverpool	Birmingham	Chester
Wirral	Manchester	Sale

Education and Qualifications

SECONDARY EDUCATION	State Secondary and Lyceum Corfu Greece 1982-1989
MEDICAL SCHOOL	University of Verona Italy 1990-1997
QUALIFICATIONS	MD in Medicine October 1997
CCT (Trauma and Orthopaedics)	University of Verona awarded 2002
Fellowship in Limb reconstruction	Royal Liverpool and Alder Hey Hospitals 2002
Fellowship in Trauma Surgery	Royal Liverpool University Hospital 2003-2004
FRCS Conferred July 2019	Royal College of Surgeons of Glasgow PID: 140550

Orthopaedic Training

University of Verona Italy Training Program in Trauma and Orthopaedic Surgery. (October 1997-November 2002)

The programme is run by one of the foremost universities in Italy. The Orthopaedic Department of the University of Verona (based at the Policlinico Hospital) has an international reputation for trauma surgery and limb reconstruction. In addition to getting a broad foundation in general adult and paediatric Orthopaedics, my training there focused in Orthopaedic trauma including the management and surgery of multiply injured patients, open limb injuries and complex peri- and intra-articular fractures. In this period I gained experience in non-operative and operative techniques of trauma care, with special emphasis on minimally invasive methods.

The Orthopaedic department at the Policlinico University Hospital was notable for providing a wide exposure to the use of external fixation techniques in trauma and limb reconstruction. The unit has for introduced innovations in this field and was at the forefront of the concept of 'damage control surgery.

This experience during my residency programme encouraged my interest in complex trauma and limb reconstruction.

Fellow in Limb reconstruction at the Royal Liverpool and Broadgreen University Hospital and Alder Hey Children's hospital U.K. (October 2001-July 2002).

This position has broadened my experience in the field of trauma and limb reconstruction. I was a Limb reconstruction fellow under the supervision of Mr Selvadurai Nayagam who is one of the most respected Limb reconstruction Surgeons in the UK and Internationally. I was exposed to the use of circular external fixators for trauma and deformity correction, bone infection, non union surgery and limb lengthening surgery. I was also introduced in a team approach to the delivery of care for complex trauma, involving specialist nurses, therapists and medical staff from other disciplines (notably Plastic Surgery, Radiology and Medical Microbiology). My Fellowship has been further enhanced by my involvement in research.

Fellow in Trauma Surgery, Royal Liverpool and Broadgreen University Hospital, U.K. (March 2003- June 2004)

I had the opportunity to work for a year as a trauma fellow in one of the busiest trauma units in the North West of England.

During that period I was able to refine my knowledge and surgical skills in complex trauma including managing patients with multiple injuries, open fractures, complex periarticular fractures I improved my knowledge in managing complex hip fractures, and both upper and lower limb injuries.

Consultant in Orthopaedics and Trauma, Royal Liverpool and Broadgreen University Hospital, U.K. (Locum position from 2004-2007). Since then substantive.

These successive appointments have assisted my development as a trauma and limb reconstruction surgeon. I led a trauma service with a group of patients directly under my care and developed the skills for management in a rapidly changing NHS. I was responsible for the organisation of the junior doctors and contribute to the administration of the Consultants on-call rota. I have fulfilled the role of consent lead for the department, Map of Medicine lead, Enhanced recovery lead.

Visiting surgeon Department of Trauma Surgery, Hand and Reconstructive Surgery, St. Vinzenz- Hospital, Cologne, Germany. (March 2005).

This was a group visit with my colleagues Durai Nayagam and Badri Narayan, arranged in order to gain exposure in novel techniques of management of complex injuries of the elbow and wrist as well as post-injury joint stiffness. The leading surgeon at the unit, Professor [Dietmar Pennig](#), has pioneered several innovations in the field of trauma. The Pennig method of treatment of elbow stiffness has been introduced in the Royal Liverpool and Broadgreen University Hospitals after our visit in Cologne and has benefitted many patients with severe injuries and post-traumatic stiffness. I had also the opportunity to learn from Professor Penning and Dr [Konrad Mader](#) who is an extremely gifted and innovative upper limb surgeon a variety of novel techniques in upper limb trauma. and gain exposure on the use of implants such as fragment specific plates in the wrist and elbow designed by these surgeons. I had exposure to their advanced techniques well before they went to become popularised widely in trauma surgery in specialist centres. With Dr Mader we have continued a

collaboration with exchange of visits between our units and invitations for lectures on International scientific meetings.

Visiting Surgeon Program Campbell Clinic, Elvis Presley Level 1 trauma Center, Memphis, Tennessee, USA. (Oct-Nov 2005)

This is one of the premier Orthopaedic and Trauma units in the USA. I attended under the tutelage of [Professor Emeritus Thomas Russell](#), who is an ex [Orthopaedic trauma Association](#) president, one of the greatest innovators and respected Trauma oriented Orthopaedic surgeons in the world. I learned a lot from him in the use of internal fixation techniques for long bone and peri-articular fractures. I also gained exposure on modern techniques in the management of pelvic fractures.

Visiting Surgeon Program Trauma Surgery Department, Bergmannsheil, Uniersitätsklinik, Bochum, Germany (Jan-Feb 2006).

I undertook a secondment with one the busiest trauma units in Europe. The University Hospital of Bochum is the first designated trauma centre in Germany and the exposure I had there was focused in the management of politrauma patients, pelvic injuries and periprosthetic fractures in osteoporotic individuals.
