Profile

I am a speech and language therapist with extensive experience and knowledge of working with communication and swallowing impairments as a result of a wide range of neurological disorders. My main area of expertise is traumatic brain injury.

Since qualifying in 2005, I have worked with adults and adolescents in a variety of settings including major trauma hospitals, acute hospitals, outpatient services, and community-based rehabilitation.

I have achieved the highest level of competence, within the RCSLT framework, and have worked at Consultant Dysphagia Practitioner (Level D) since 2015.

I am a passionate, positive and enthusiastic person who strives to achieve clinical excellence. This has enabled me to progress substantially in my career. I have lectured in universities and have had the opportunity to work alongside some of the most renowned medical and healthcare professionals in the country.

I manage an independent practice which provides clinical excellence, bespoke and innovative interventions and proven techniques and technologies which are supported by the most up-to-date research and evidence.

I currently provide clinical consultancy services and supervision of speech and language therapists at Priory Brain Injury Services, Elysium Brain Injury Services, Christchurch and Pathfinders Complex Care.

In addition, I have my own clinical caseload of diverse and broad clients with communication and swallowing difficulties post brain injury.

I have been a guest lecturer at University of Sheffield and Goldsmiths University London and. I am an accredited clinical educator with De Montfort University and provide regular student training sessions.
