## **SUMMARY OF PROFESSIONAL EXPERIENCE**

### **Current Post**

I am a Consultant Orthopaedic Trauma surgeon at Cambridge University Hospitals and was the Trauma Lead from 2014-2020.

Cambridge University Hospital is the Major Trauma centre for East Anglia, and hence is dealing with the majority of the region's complex trauma.

I am one of seven orthopaedic trauma surgeons with a specialist interest in complex trauma, and I regularly treat patients who have sustained multiple injuries.

I take part in the consultant on call rota for trauma and have a weekly fracture clinic for patients sustaining all types of orthopaedic injuries.

My areas of specialist interest are pelvic and acetabular (hip socket) fractures, open fractures, multiply injured patients, complex lower limb injuries and amputations.

I receive referrals from throughout the East of England (population 5.5million) for advice and definitive management of pelvic and acetabular fractures and complex trauma through my web referral form [www.cambridgepelvicsurgery.co.uk](http://www.cambridgepelvicsurgery.co.uk)

I have a significant academic interest and have a £250,000 grant awarded for research into distal femur fractures, £250,000 grant for research into acetabular fractures and £2.5 million pounds for research into pelvic fractures.

I instruct regularly on international trauma courses.

I was the invited chairman for the 2018 and 2020, European AO pelvic and acetabular course.

AO courses are world leading instructional trauma courses.

### **Medico-legal Experience**

I undertake, around 150 high value personal injury medicolegal reports a year.

In recent years a large proportion of my instructions are related to pelvic and acetabular fractures, amputations, complex lower limb injuries, and patients who have sustained multiple injuries.

I still regularly treat, as well as report on patients sustaining single limb injuries.

I DO NOT prepare reports on whiplash, spinal injuries or back pain.

My ratio of claimant to defendant work is approximately 80:20.

I also report on around 10 clinical negligence cases per year.

## ACADEMIC

I have a significant academic interest.

I have over 50 publications in peer review journals, including papers on open fractures, pelvic fractures, acetabular fractures, knee fractures, wrist fractures, tibial fractures, foot fractures, hip fractures, and trauma in general.

I was the chief investigator for [KFORT](#). This is a randomised trial comparing distal femoral replacement vs fixation in older patients who have sustained a distal femur fracture.

*I was awarded a **£250,000 grant** from the National Institute for Health Research (NIHR) to run this trial at 7 UK centres.*

I was a co-applicant for [ACEFIT](#). This was a randomised trial comparing non-operative management, vs fixation, vs fix and replace for older patients who have sustained acetabular fractures

We were awarded **£250,000 from the NIHR** to run this trial.

I was co-applicant for L1FE study . This was a randomised trial looking at treatment of older patients with pelvic fractures. We were **awarded a grant of £2.5 million from NIHR** to run this trial.

I was the chair of the trial steering committee for [TULIP](#), this was a randomised trial looking at different treatment options in patients who have sustained pelvic fractures

I am / have been the principal investigator in Cambridge for 6 National trauma trials including:

AIM – A prospective trial into the management of ankle fractures in older patients

WOLLF – A prospective randomised trial on open lower limb fractures

WHIST – A prospective randomised trial on wound healing following lower limb injuries

FiXDT – A prospective randomised trial into the management of distal tibial fractures

WHITE – Looking at hip fracture management in older patients

STAR – A prospective randomised trial for patients with Achilles tendon rupture

I have a postgraduate award in medical education.

I have organised and chaired 3 cadaveric trauma approaches courses in Cambridge.

I co-chaired and organised the 1<sup>st</sup> National Pelvic and Acetabular Masters course in Cambridge.

I am an AO instructor, and have instructed on the basics, advances and pelvic & acetabular course.

I was invited chairman for the European AO Pelvic and acetabular fracture course in 2018 and 2020. This is the leading pelvic instructional course in the world.

I have instructed regularly at the Edinburgh International Trauma Symposium. [www.trauma.co.uk](http://www.trauma.co.uk)
